subject and title index 1983

Plastics Engineering, Volume 39

A

1. Actuators

Control technology—Part 5: systems and actuators, N. Peach, August, p. 49

2. Additives

Additives roundup: January, PE Staff, January, p. 43

Advancing technology to spur big growth for plastic composites during the '80s, J. A. Mock, February, p. 13

Additives roundup: March, PE Staff, March, p. 53

Tracking flame retardants for the '80s, B. Sutker, April, p. 27

Additives roundup: May, PE Staff, May, p. 48

Additives '83—Making the processor's life easier, J. A. Mock, June, p. 19

Additives roundup: July, PE Staff, July, p. 37

New Division nearly onstream, G. A. Martinelli, August, p. 10

Additives roundup: August, PE Staff, August, p. 35

Choosing the optimum heat stabilizer for rigid PVC, M. S. Silkotch, September, p. 33

A new reinforcement for polypropylene, S. Hoshino, H. Tanaka, and T. Kimura, October, p. 37

The compounding scene: no place for amateurs, N. Peach, November, p. 19

Zircoaluminates strengthen premium ranges of chemical coupling agents, L. B. Cohen, November, p. 29

Additives roundup: December, PE Staff, December, p. 31

3. Alloys

The mechanical properties of various reinforced thermoplastic alloys at elevated temperatures, T. E. Fisher and M. J. Balow, April, p. 31

More-heat-resistant alloys open up new PVC uses, L. G. Bourland and A. D. Wambach, May, p. 23

Polymer technology—Part 8: polymer resins, blends, and composites, J. R. Fried, September, p. 37

4. Annual Technical Conference

ANTEC 1983: Plastics—engineering today for tomorrow's world, March, p. 21 (highlights and schedule)

Thinking of writing an ANTEC paper?, J. L. Throne, July, p. 39

ANTEC 1983: Strategies for the future, July, P. 41 (highlights)

5. Antioxidants

Additives roundup: January, PE Staff, January, p. 43

High-speed liquid chromatography: applications in quality-assurance testing of plastic materials, M. W. Dong and J. L. DiCesare, February, p. 25

Additives '83—Making the processor's life easier, J. A. Mock, June, p. 19

Additives roundup: December, PE Staff, December, p. 31

6. Assembly

A plastics processor's guide to robots, K. Susnjara, July, p. 19

Automotive plastics: 1983 status report, J. A. Mock, August, p. 19

7. Automation

Automation, tooling and thermosets, Thermoset Division and Ontario Section, January, p. 56 (program of conference only)

A plastics processor's guide to robots, K. Susnjara, July, p. 19

8. Automotive Plastics

Automotive plastics: 1983 status report, J. A. Mock, August, p. 19

Automotive Says "Yes" To Plastics: Discovering New Frontiers Through Imagination, August, p. 27 (highlights and schedule)

Plastics in automotive: no longer the "silent" partner, PE Staff, December, p. 39 (Conference Highlights)

B

9. Blends

Polymer technology—Part 8: polymer resins, blends, and composites, J. R. Fried, September, p. 37

The compounding scene: no place for amateurs, N. Peach, November p. 19

10. Blowing Agents

Additives roundup: December, PE Staff, December, p. 31

11. Blowmolding

High Performance Container Technology, Chicago Section and Blow Molding Division, September, p. 76 (schedule of conference only)

C

12. Carbon Fibers

Carbon-reinforced thermoplastics: What they offer, how to process them, S. R. Gerteisen and S. D. Gerbig, January, p. 39

Advancing technology to spur big growth for plastic composites during the '80s, J. A. Mock, February, p. 13

13. Catalysts

Additives '83—Making the processor's life easier, J. A. Mock, June, p. 19

14. Cavity Pressure

Mold design, manufacture, and control—an integrated concept, J. A. Mock, January, p. 15

15. Classification of Plastics

ASTM D 4000: A new classification system devoted to plastics, F. O. Swanson, January, p. 31

A molder's cosmetic standard for plastic parts, B. Britchet, March, p. 63

16. Coating

Coating and finishing of reinforced plastics for today's markets, J. B. Peters, February, p. 29

UV coatings for plastics: fast cures at low temperatures, J. E. Fleischer, September, p. 43

17. Colorants

Additives roundup: January, PE Staff, January, p. 43

Additives roundup: March, PE Staff, March, p. 53

Additives roundup: May, PE Staff, May, p. 48

Additives '83—Making the processor's life easier, J. A. Mock, June, p. 19

Additives roundup: July, PE Staff, July, p. 37

Additives roundup: August, PE Staff, August, p. 35

Cost-Effective Color Compounding with Proper Equipment, Ohio-Firelands Section and Color and Appearance Division, September, p. 74 (schedule of conference only)

Color quality in part design relies heavily on resin choice, S. B. Gordon, November, p. 37

Additives roundup: December, PE Staff, December, p. 31

18. Composites

Advancing technology to spur big growth for plastic composites during the '80s, J. A. Mock, February, p. 13

SPI RP/C Conference: market penetration by reinforced plastics and composites lightens a dark season, PE Staff, April, p. 41

Polymer technology—Part 8: polymer resins, blends, and composites, J. R. Fried, September, p. 37

19. Compounding

Cost-Effective Color Compounding with Proper Equipment, Ohio-Firelands Section and Color and Appearance Division, September, p. 74 (schedule of conference only)

The compounding scene: no place for amateurs, N. Peach, November, p. 19

20. Computer-Aided Design

Mold design, manufacture, and control—an integrated concept, J. A. Mock, January, p. 15

Computer-aided engineering: the coming revolution, G. Menges, August, p. 37

21. Computer Technology

User-friendly microprocessors are talking plastics, A. Notte, October, p. 19

22. Contaminants

Process and performance optimization of chemically foamed polyesters, M. W. Dong and J. L. DiCesare, February, p. 25

Continuous extruder filtration enhances product quality and throughput, C. Bessemer, July, p. 29

Magnetic separators protect processing stream from ferrous contaminants, A. E. Gedgaudas, October, p. 29

23. Controls

Mold design, manufacture, and control—an integrated concept, J. A. Mock, January, p. 15

Control technology—Part 2: Electric systems and motor control, N. Peach, January, p. 23

Advancing technology to spur big growth for plastic composites during the '80s, J. A. Mock, February, p. 13

Control technology—Part 3: Ac and dc electric motors and adjustable-speed drives, N. Peach, April, p. 15

Control technology—Part 4: Sensors and instruments, N. Peach, June, p. 39

Efficiency is the goal for selecting melt devices, K. Kapfer and K. Eise, July, p. 25

Control technology—Part 5: systems and actuators, N. Peach, August, p. 49

User-friendly microprocessors are talking plastics, A. Notte, October, p. 19

24. Cooling

Grooved intensively cooled extruders for difficult polyolefins, H. Helmy, August, p. 43

25. Coupling Agents

Additives roundup: July, PE Staff, July, p. 37

Zircoaluminates strengthen premium ranges of chemical coupling agents, L. B. Cohen, November, p. 29

26. Curatives

Additives roundup: December, PE Staff, December, p. 31

27. Current

Control technology—Part 2: Electric systems and motor control, N. Peach, January, p. 23

Control technology—Part 3: Ac and dc electric motors and adjustable-speed drives, N. Peach, April, p. 15

D

28. Decorating

Decorating Horizons, Decorating Division and Philadelphia Section, August, p. 67 (schedule of conference only)

Quality finishes are crucial to plated plastic parts, N. Anis, November, p. 19

Plastics product design—a controlled balancing act, J. A. Mock, December, p. 17

29. Denesting Agent

Additives roundup: July, PE Staff, July, p. 37

30. Desiccants

How to dry resins for optimum parts and trouble-free processing, J. W. Doub, June, p. 43

31. Design

Process and performance optimization of chemically foamed polyesters, J. Ahnemiller, February, p. 21

A molder's cosmetic standard for plastic parts, B. Britchet, March, p. 63

The mechanical properties of various reinforced thermoplastic alloys at elevated temperatures, T. E. Fisher and M. J. Balow, April, p. 31

Advancing technology opens new markets to plastic food packaging, L. B. Ryder, May, p. 15

Polyester elastomer: The designer's link between rubber and plastics, J. L. Henderson, June, p. 31

Designing successful open-head HDPE shipping containers, W. D. Powell, July, p. 33

Computer-aided engineering: the coming revolution, G. Menges, August, p. 37

UV coatings for plastics: fast cures at low temperatures, J. E. Fleischer, September, p. 43

Mold Makers and Designers—The Plastics Industry's Future, Mold Making and Mold Design Division and Western Michigan Section, September, p. 75

Color quality in part design, relies heavily on resin choice, S. B. Gordon, November, p. 37

Plastic product design—a controlled balancing act, J. A. Mock, December, p. 17

32. Dry Blends

How to injection-mold parts from rigid PVC blends, K. G. Mieure and R. G. Hale, September, p. 29

33. Drying

How to dry resins for optimum parts and trouble-free processing, J. W. Doub, June, p. 43

34. Ductility

HMW injection-molding polyphenylene sulfide compound has more ductility, R. S. Shue, J. H. Walker, J. S. Dix, and D. G. Brady, April, p. 37

E

35. Efficiency

Semiconductor heaters stimulate new approach to plasticating systems, R. Sikora, December, p. 35

36. Elastomers

Polymer technology—part 6: Elastomers and thermosets, J. R. Fried, March, p. 67

Polyester elastomer: The designer's link between rubber and plastics, J. L. Henderson, June, p. 31

37. Electric-discharge Machinery

Mold design, manufacture, and control—an integrated concept, J. A. Mock, January, p. 15

38. Electric Motors

Control technology—Part 2: Electric systems and motor control, N. Peach, January, p. 23

Control technology—Part 3: Ac and dc electric motors and adjustable-speed drives, N. Peach, April, p. 15

39. Electromagnetic Interference Shielding

Advancing technology to spur big growth for plastic composites during the '80s, J. A. Mock, February, p. 13

40. Electroplating

UV coatings for plastics: fast cures at low temperatures, J. E. Fleischer, September, p. 43

Quality finishes are crucial to plated plastic parts, N. Anis, November, p. 19

41. Environmental Resistance

Now durable nylons 11 and 12 allow parts to withstand the harshest environments, C. Vodges, October, p. 33

42. Epoxies

Advancing technology to spur big growth for plastic composites during the '80s, J. A. Mock, February, p. 13

Polymer technology—Part 6: Elastomers and thermosets, J. R. Fried, March, p. 67

Insights into molding RIM materials, W. Macosko, April, p. 21

43. Extrusion

Continuous extruder filtration enhances product quality and throughput, C. Bessemer, July, p. 29

Grooved intensively cooled extruders for difficult polyolefins, H. Helmy, August, p. 43

The compounding scene: no place for amateurs, N. Peach, November, p. 19

Plastics product design—a controlled balancing act, J. A. Mock, December, p. 17

Semiconductor heaters stimulate new approach to plasticating systems, R. Sikora, December, p. 35

F

44. Fabrication

Joining large plastic parts? Try vibration welding, J. A. Mock, June, p. 27

45. Fillers

Advancing technology to spur big growth for plastic composites during the '80s, J. A. Mock, February, p. 13

Additives roundup: March, PE Staff, March, p. 53

Additives roundup: May, PE Staff, May, p. 48

Additives roundup: August, PE Staff, August, p. 35

Polymer technology—Part 8: polymer resins, blends, and composites, J. R. Fried, September, p. 37

Additives roundup: December, PE Staff, December, p. 31

46. Films

Solvent-cast films, S. Ricklin, May, p. 29

Continuous extruder filtration enhances product quality and throughput, C. Bessemer, July, p. 29

47. Filtration

Continuous extruder filtration enhances product quality and throughput, C. Bessemer, July, p. 29

48. Finishing

Coating and finishing of reinforced plastics for today's markets, J. B. Peters, February, p. 29

Quality finishes are crucial to plated plastic parts, N. Anis, November, p. 19

49. Flame Retardants

Tracking flame retardants for the '80s, B. Sutker, April, p. 27

Additives '83—Making the processor's life easier, J. A. Mock, June, p. 19

Additives roundup: July, PE Staff, July, p. 37

Additives roundup: August, PE Staff, August, p. 35

Additives roundup: December, PE Staff, December, p. 31

50. Flammability

The search for low-smoke polyurethane foams goes on, R. M. Murch and C. L. Kehr, January, p. 35

Tracking flame retardants for the '80s, B. Sutker, April, p. 27

More-heat-resistant alloys open up new PVC uses, L. G. Bourland and A. D. Wambach, May, p. 23

Regulatory problems—wading through the rules, J. H. Heckman, September, p. 23

51. Flaws

A molder's cosmetic standard for plastic parts, B. Britchet, March, p. 63

52. Flow

Control technology—Part 4: Sensors and instruments, N. Peach, June, p. 39

53. Fluoropolymers

Polymer technology—Part 7: Engineering thermoplastics and speciality plastics, J. R. Fried, May, p. 35

54. Foams

Process and performance optimization of chemically foamed polyesters, J. Ahnemiller, February, p. 21

Melt rheometer update, J. M. Dealy, March, p. 57

55. Food Packaging

Advancing technology opens new markets to plastic food packaging, L. B. Ryder, May, p. 15

Regulatory problems—wading through the rules, J. H. Heckman, September, p. 23

56. Fragrances

Additives '83—Making the processor's life easier, J. A. Mock, June, p. 19

Additives roundup: December, PE Staff, December, p. 31

G

57. Gas-Polymer Interface

Structural-web molding, O. Olabisi, October, p. 28

58. Glass Reinforcement

Carbon reinforced thermoplastics: What they offer, how to process them, S. R. Gerteisen and S. D. Gerbig, January, p. 39

H

59. Heat Resistance

More-heat-resistant alloys open up new PVC uses, L. G. Bourland and A. D Wambach, May, p. 23

60. Heat Shrinkability

Now durable nylons 11 and 12 allow parts to withstand the harshest environments, C. Vodges, October, p. 33

61. Heat Stabilizers

Additives roundup: March, PE Staff, March, p. 53

Additives '83—Making the processor's life easier, J. A. Mock, June, p. 19

I

62. Impact Modifiers

Additives roundup: March, PE Staff, March, p. 53

Additives '83—Making the processor's life easier, J. A. Mock, June, p. 19

Additives roundup: July, PE Staff, July, p. 37

63. Induction Motors

Control technology—Part 3: Ac and dc electric motors and adjustable-speed drives, N. Peach, April, p. 15

64. Injection Molding

Mold design, manufacture, and control—an integrated concept, J. A. Mock, January, p. 15

Carbon-reinforced thermoplastics: What they offer, how to process them, S. R. Gerteisen and S. D. Gerbig, January, p. 39

HMW Injection-molding polyphenylene sulfide compound has more ductility R. S. Shue, J. H. Walker, J. S. Dix, and D. G. Brady, April, p. 37

A temperature-regulated sprue can solve tough molding problems, R. J. Shaw, May, p. 45

A plastics processor's guide to robots, K. Susnjara, July, p. 19

Designing successful open-head HDPE shipping containers, W. D. Powell, July, p. 33

Innovations in Injection Molding, Injection Molding Division and Newark Section, August, p. 68 (Schedule of conference only)

How to injection-mold parts from rigid PVC blends, K. G. Mieure and R. G. Hale, September, p. 29

Structural-web molding, O. Olabisi, October, p. 25

Plastics product design—a controlled balancing act, J. A. Mock, December, p. 17.

Semiconductor heaters stimulate new approach to plasticating systems, R. Sikora, December, p. 35

65. Instrumentation

High-speed liquid chromatography: applications in quality-assurance testing of plastic materials, M. W. Dong and J. L. DiCesare, February, p. 25

Melt rheometer update, J. M. Dealy, March, p. 57

Control technology—Part 4: Sensors and instruments, N. Peach, June, p. 39

66. Intumescence

Tracking flame retardants for the '80s, B. Sutker, April, p. 27

L

67. Liquid Chromatography

High-speed liquid chromatography: applications in quality-assurance testing of plastic materials, M. W. Dong and J. L. DiCesare, February, p. 25

68. Lubricants

Additives roundup: January, PE Staff, January, p. 43

Additives roundup: March, PE Staff, March, p. 53

Additives '83—Making the processor's life easier, J. A. Mock, June, p. 19

Additives roundup: July, PE Staff, July, p. 37

M

69. Machinery

Control technology—Part 2: Electric systems and motor control, N. Peach, January, p. 23

A plastics processor's guide to robots, K. Susnjara, July, p. 19

Efficiency is the goal for selecting melt devices, K. Kapfer and K. Eise, July, p. 25

Grooved intensively cooled extruders for difficult polyolefins, H. Helmy, August, p. 43

Exacting RIM process controls help yield higher-quality plastic parts, G. M. Peters, November, p. 33

70. Magnesium Oxysulfate

A new reinforcement for polypropylene, S. Hoshino, H. Tanaka, and T. Kimura, October, p. 37

71. Magnetic Separation

Magnetic separators protect processing stream from ferrous contaminants, A. E. Gedgaudas, October, p. 29

72. Materials

Plastics product design—a controlled balancing act, J. A. Mock, December, p. 17

73. Mechanical Properties

The mechanical properties of various reinforced thermoplastic alloys at elevated temperatures, T. E. Fisher and M. J. Balow, April, p. 31

Polyester elastomer: The designer's link between rubber and plastics, J. L. Henderson, June, p. 31

Now durable nylons 11 and 12 allow parts to withstand the harshest environments, C. Vodges, October, p. 33

74. Medical Plastics

Midwest Medical Plastics and Devices Conference, Chicago Section and Medical Plastics Division, August, p. 66

75. Melt Rheology

Melt rheometer update, J. M. Dealy, March, p. 57

More-heat-resistant alloys open up new PVC uses, L. G. Bourland and A. D. Wambach, May, p. 23

Efficiency is the goal for selecting melt-devices, K. Kapfer and K. Eise, July, p. 25

76. Microprocessor Control

User-friendly microprocessors are talking plastics, A. Notte, October, p. 19

Exacting RIM process controls help yield higher-quality plastic parts, G. M. Peters, November, p. 33

77. Miscibility

More-heat-resistant alloys open up new PVC uses, L. G. Bourland and A. D. Wambach, May, p. 23

Polymer technology—Part 8: polymer resins, blends, and composites, J. R. Fried, September, p. 37

78. Mixing

The compounding scene: no place for amateurs, N. Peach, November, p. 19

79. Mold Accessories

A temperature-regulated sprue can solve tough molding problems, R. J. Shaw, May, p. 45

80. Mold Design

Mold design, manufacture, and control—an integrated concept, J. A. Mock, January, p. 15

Designing successful open-head HDPE shipping containers, W. D. Powell, July, p. 33

Computer-aided engineering: the coming revolution, G. Menges, August, p. 37

Mold Makers and Designers—The Plastics Industry's Future, Mold Making and Mold Design Division and Western Michigan Section, September, p. 75 (schedule of conference only)

81. Molecular Weight

HMW injection-molding polyphenylene sulfide compound has more ductility R. S. Shue, J. H. Walker, J. S. Dix, and D. G. Brady, April, p. 37

N

82. National Technical Conference

Automotive Says "Yes" to Plastics: Discovering New Frontiers Through Imagination, August, p. 27 (highlights and schedule)

Plastics in automotive: no longer the "silent" partner, PE Staff, December, p. 39

83. Nylon

ASTM D 4000: A new classification system devoted to plastics, F. O. Swanson, January, p. 33

Carbon reinforced thermoplastics: What they offer, how to process them, S. R. Gerteisen and S. D. Gerbig, January, p. 39

Insights into molding ... materials, W. Macosko, April, p. 21

Now durable nylons 11 and 12 allow parts to withstand the harshest environments, C. Vodges, October, p. 33

O

84. Optical Properties

Color quality in part design relies heavily on resin choice, S. B. Gordon, November, p. 37

P

85. Packaging

Advancing technology opens new markets to plastic food packaging, L. B. Ryder, May, p. 15

Vinyl in Packaging, Ontario Section, July, p. 58 (schedule of conference only)

High-Performance Container Technology, Chicago Section and Blow Molding Division, September, p. 76 (schedule of conference only)

86. Photoinitiator

Additives roundup: August, PE Staff, August, p. 35

87. Physical Properties

Polyester elastomer: The designer's link between rubber and plastics, J. L. Henderson, June, p. 31

88. Plasticizers

Process and performance optimization of chemically foamed polyesters, M. W. Dong and J. L DiCesare, February, p. 25

Additives roundup: March, PE Staff, March, p. 53

Additives roundup: May, PE Staff, May, p. 48

Additives '83—Making the processor's life easier, J. A. Mock, June, p. 19

Polymer technology—Part 8: polymer resins, blends, and composites, J. R. Fried, September, p. 37

89. Polyamide

Polymer technology—Part 7: Engineering thermoplastics and speciality plastics, J. R. Fried, May, p. 35

90. Polyaryletherketone

Polymer technology—Part 7: Engineering thermoplastics and speciality plastics, J. R. Fried, May, p. 35

91. Polycarbonate

Carbon-reinforced thermoplastics: What they offer, how to process them, S. R. Gerteisen and S. D. Gerbig, January, p. 39

Polymer technology—Part 7: Engineering thermoplastics and speciality plastics, J. R. Fried, May, p. 35

92. Polyester

Process and performance optimization of chemically foamed polyesters, J. Ahnemiller, February, p. 21

Polymer technology—Part 7: Engineering thermoplastics and speciality plastics, J. R. Fried, May, p. 35

Polyester elastomer: The designer's link between rubber and plastics, J. L. Henderson, June, p. 31

93. Polyethylene

High-speed liquid chromatography: applications in quality-assurance testing of plastic materials, M. W. Dong and J. L. DiCesare, February, p. 25

Polymer technology—Part 7: Engineering thermoplastics and speciality plastics, J. R. Fried, May, p. 35

Designing successful open-head HDPE shipping containers, W. D. Powell, July, p. 33

Grooved intensively cooled extruders for difficult polyolefins, H. Helmy, August, p. 43

Semiconductor heaters stimulate new approach to plasticating systems, R. Sikora, December, p. 35

94. Polyethylene Terephthalate

Advancing technology opens new markets to plastic food packaging, L. B. Ryder, May, p. 15

Regulatory problems—wading through the rules, J. H. Heckman, September, p. 23

95. Polymer Technology

Polymer technology—Part 6: Elastomers and thermosets, J. R. Fried, March, p. 67

Polymer technology—Part 7: Engineering thermoplastics and speciality plastics, J. R. Fried, May, p. 35

Polymer technology—Part 8: Polymer resins, blends, and composites, J. R. Fried, September, p. 37

96. Polyphenylene Oxide

Polymer technology—Part 7: Engineering thermoplastics and speciality plastics, J. R. Fried, May, p. 35

97. Polyphenylene Sulfide

HMW injection-molding polyphenylene sulfide compound has more ductility, R. S. Shue, J. H. Walker, J. S. Dix, and D. G. Brady, April, p. 37

Polymer technology—Part 7: Engineering thermoplastics and speciality plastics, J. R. Fried, May, p. 35

98. Polypropylene

A new reinforcement for polypropylene, S. Hoshino, H. Tanaka, and T. Kimura, October, p. 37

99. Polystyrene

Insights into molding RIM materials, W. Macosko, April, p. 21

Joining large plastic parts? Try vibration welding, J. A. Mock, June, p. 27

100. Polysulfone

Polymer technology—Part 7: Engineering thermoplastics and speciality plastics, J. R. Fried, May, p. 35

101. Polyurethane

The search for low-smoke polyurethane foams goes on, R. M. Murch and C. L. Kehr, January, p. 35

Polymer technology—Part 6: Elastomers and thermosets, J. R. Fried, March, p. 67

Insights into molding RIM materials, W. Mocosko, April, p. 21

Exacting RIM process controls help yield higher-quality plastic parts, G. M. Peters, November, p. 33

102. Polyvinyl Chloride

More heat-resistant alloys open up new PVC uses, L. G. Bourland and A. D. Wambach, May, p. 23

Vinyl in Packaging, Ontario Section, July, p. 58 (schedule of conference only)

How to injection-mold parts from rigid PVC blends, K. G. Mieure and R. G. Hale, September, p. 29

Choosing the optimum heat stabilizer for rigid PVC, M. S. Silkotch, September, p. 33

103. Power

Control technology—Part 2: Electric systems and motor control, N. Peach, January, p. 23

Control technology—Part 4: Sensors and instruments, N. Peach, June, p. 39

104. Processing

Carbon-reinforced thermoplastics: What they offer, how to process them, S. R. Gerteisen and S. D. Gerbig, January, p. 39

Coating and finishing of reinforced plastics for today's markets, J. B. Peters, February, p. 29

Melt rheometer update, J. M. Dealy, March, p. 57

Insights into molding RIM materials, W. Macosko, April, p. 20

Solvent-cast films, S. Ricklin, May, p. 29

How to dry resins for optimum parts and trouble-free processing, J. W. Doub, June, p. 43

A plastics processor's guide to robots, K. Susnjara, July, p. 19

Continuous extruder filtration enhances product quality and throughput, C. Bessemer, July, p. 29

Grooved intensively cooled extruders for difficult polyolefins, H. Helmy, August, p. 43

How to injection-mold parts from rigid PVC blends, K. G. Mieure and R. G. Hale, September, p. 29

Structural-web molding, O. Olabisi, October, p. 25

Quality finishes are crucial to plated plastic parts, N. Anis, November, p. 25

Plastics product design—a controlled balancing act, J. A. Mock, December, p. 17

105. Processing Aids

Additives roundup: August, PE Staff, August, p. 35

Additives roundup: December, PE Staff, December, p. 31

106. Product Liability

Regulatory problems—wading through the rules, J. H. Heckman, September, p. 23

107. Prototyping

Plastics product design—a controlled balancing act, J. A. Mock, December p. 17

108. Pultrusion

Advancing technology to spur big growth for plastic composites during the '80s, J. A. Mock, February, p. 13

109. Pumping

Efficiency is the goal for selecting melt devices, K. Kapfer and K. Eise, July, p. 25

Q

110. Quality Control

High-speed liquid chromatography: applications in quality-assurance testing of plastic materials, M. W. Dong and J. L. DiCesare, February, p. 25

A molder's cosmetic standard for plastic parts, B. Britchet, March, p. 63

Magnetic separators protect processing stream from ferrous contaminants, A. E. Gedgaudas, October, p. 29

Color quality in part design relies heavily on resin choice, S. B. Gordon, November, p. 37

R

111. Reaction Injection Molding

Coating and finishing of reinforced plastics for today's markets, J. B. Peters, February, p. 29

Insights into molding RIM materials, N. Macosko, April, p. 21

Automotive plastics: 1983 status report, J. A. Mock, August, p. 19

Exacting RIM process controls help yield higher-quality plastic parts, G. M. Peters, November, p. 33

Plastics product design—a controlled balancing act, J. A. Mock, December, p. 17

112. Recycling

Continuous extruder filtration enhances product quality and throughput, C. Bessemer, July, p. 29

113. Regional Technical Conference

Automation, tooling and thermosets, Thermoset Division and Ontario Section, January, p. 56 (program only)

Vinyl in Packaging, Ontario Section, July, p. 58 (schedule of conference only)

Midwest Medical Plastics and Devices Conference, Chicago Section and Medical Plastics Division, August, p. 66 (schedule of conference only)

Decorating Horizons, Decorating Division and Philadelphia Section August, p. 67 (schedule of conference only)

Innovations in Injection Molding, Injection Molding Division and Newark Section, August, p. 68 (schedule of conference only)

Cost-Effective Color Compounding with Proper Equipment, Ohio-Firelands Section and Color and Appearance Division, September, p. 74 (schedule only)

Mold Makers and Designers—The Plastics Industry's Future, Mold Making and Mold Design Division and Western Michigan Section, September, p. 75 (schedule of conference only)

High-Performance Container Technology, Chicago Section and Blow Molding Division, September, p. 76 (schedule of conference only)

Polyolefins, South Texas Section and Thermoplastics Materials and Foams Division, December, p. 58 (program of conference only).

114. Regulation

Tracking flame retardants for the '80s, B. Sutker, April, p. 27

Regulatory problems—wading through the rules, J. H. Heckman, September, p. 23

115. Reinforced Plastics

SPI RP/C Conference: market penetration by reinforced plastics and composites lightens a dark season, PE Staff, April, p. 41

Automotive plastics: 1983 status report, J. A. Mock, August, p. 19

SPI's annual RP/C Conference incorporates trade show, November, p. 43

116. Reinforced Reaction Injection Molding

Advancing technology to spur big growth for plastic composites during the '80s, J. A. Mock, February, p. 13

117. Reinforcements

Advancing technology to spur big growth for plastic composites during the '80s, J. A. Mock, February, p. 13

The mechanical properties of various reinforced thermoplastic alloys at elevated temperatures, T. E. Fisher and M. J. Balow, April, p. 31

Additives roundup: May, PE Staff, May, p. 48

Additives '83—Making the processor's life easier, J. A. Mock, June, p. 19

118. Resin Transfer Molding

Advancing technology to spur big growth for plastic composites during the '80s, J. A. Mock, February, p. 13

119. Rigidsols

Choosing the optimum heat stabilizer for rigid PVC, M. S. Silkotch, September, p. 33

120. Robots

Automation, tooling and thermosets, Thermoset Division and Ontario Section, January, p. 56 (program of conference only)

A plastics processor's guide to robots, K. Susnjara, July, p. 19

121. Rovings

Additives roundup: January, PE Staff, January, p. 43

S

122. Semiconductor Heaters

Semiconductor heaters stimulate new approach to plasticating systems, R. Sikora, December, p. 35

123. Sensors

Control technology—Part 4: Sensors and instruments, N. Peach, June, p. 39

124. Sequencers

Control technology—Part 5: systems and actuators, N. Peach, August, p. 49

125. Sheet Molding Compound

Coating and finishing of reinforced plastics for today's markets, J. B. Peters, February, p. 29

Automotive plastics: 1983 status report, J. A. Mock, August, p. 19

126. Shipping Containers

Designing successful open-head HDPE shipping containers, W. D. Powell, July, p. 33

127. Smoke Generation

The search for low-smoke polyurethane foams goes on, R. M. Murch and C. L. Kehr, January, p. 35

128. Society of Plastics Engineers

ANTEC 1983: Plastics—engineering today for tomorrow's world, March, p. 21, (highlights and schedule)

The 1983-1984 SPE International Officers, April, p. 46

SPI, SPE will cosponsor plastics shows and conference, May, p. 10

SPE Annual Report for 1982-1983, May, p. 51

Jacques de Craene elected SPE VP for International Affairs, June, p. 12

Thinking of writing an ANTEC paper? J. L. Throne, July, p. 39

ANTEC 1983: Strategies for the future, July, p. 41 (highlights)

New Division nearly onstream, G. A. Martinelli, August, p. 10

Automotive Says "Yes" To Plastics: Discovering New Frontiers Through Imagination, August, p. 27 (highlights and schedule)

1983-1984 SPE Directory, September, p. 47

Plastics in automotive: no longer the "silent" partner, PE Staff, December, p. 39 (Conference highlights)

129. Solvent Casting

Solvent-cast films, S. Ricklin, May, p. 29

130. Specialty Plastics

Polymer technology—Part 7: Engineering thermoplastics and speciality plastics, J. R. Fried, May, p. 35

131. Speed

Control technology—Part 3: Ac and dc electric motors and adjustable-speed drives, N. Peach, April, p. 15

Control technology—Part 4: Sensors and instruments, N. Peach, June, p. 39

132. Sprues

A temperature-regulated sprue can solve tough molding problems, R. J. Shaw, May, p. 45

133. Sputtering

UV coatings for plastics: fast cures at low temperatures, J. E. Fleischer, September, p. 43

Plastics product design—a controlled balancing act, J. A. Mock, December, p. 17.

134. Stabilizers

Additives roundup: May, PE Staff, May, p. 48

Additives '83—Making the processor's life easier, J. A. Mock, June, p. 19

Choosing the optimum heat stabilizer for rigid PVC, M. S. Silkotch, September, p. 33

Additives roundup: December, PE Staff, December, p. 31

135. Standards

ASTM D 4000: A new classification system devoted to plastics, F. O. Swanson, January, p. 31

A molder's cosmetic standard for plastic parts, B. Britchet, March, p. 63

Regulatory problems—wading through the rules, J. H. Heckman, September, p. 23

136. Stress Cracking

HMW injection-molding polyphenylene sulfide compound has more ductility, R. S. Shue, J. H. Walker, J. S. Dix, and D. G. Brady, April, p. 37

137. Structural Web

Structural-web molding, O. Olabisi, October, p. 25

138. Styrene Maleic Anhydride

More-heat-resistant alloys open up new PVC uses, L. G. Bourland and A. D. Wambach, May, p. 23

139. Sulfone Hydrazide

Process and performance optimization of chemically foamed polyesters, J. Ahnemiller, February, p. 21

140. Synthesis

Polymer technology—Part 6: Elastomers and thermosets, J. R. Fried, March, p. 67

T

141. Technological Properties

Choosing the optimum heat stabilizer for rigic PVC, M. S. Silkotch, September, p. 33

142. Temperature Regulation

A temperature-regulated sprue can solve tough molding problems, R. J. Shaw, May, p. 45

Control technology—Part 4: Sensors and instruments, N. Peach, June, p. 39

Efficiency is the goal for selecting melt devices, K. Kapfer and K. Eise, July, p. 25

Grooved intensively cooled extruders for difficult polyolefins, H. Helmy, August, p. 43

143. Thermal Properties

The mechanical properties of various reinforced thermoplastic alloys at elevated temperatures, T. E. Fisher and M. J. Balow, April, p. 31

144. Thermosets

Automation, tooling and thermosets, Thermoset Division and Ontario Section, January, p. 56 (program of conference only)

Process and performance optimization of chemically foamed polyesters, J. Ahnemiller, February, p. 21

Melt rheometer update, J. M. Dealy, March, p. 57

Polymer technology—Part 6: Elastomers and thermosets, J. R. Fried, March, p. 67

145. Tooling

Automation, tooling and thermosets, Thermoset Division and Ontario Section, January, p. 56 (program only)

A temperature-regulated sprue can solve tough molding problems, R. J. Shaw, May, p. 45

146. Toxicity

Regulatory problems—wading through the rules, J. H. Heckman, September, p. 23

147. Trimming

A plastics processor's guide to robots, K. Susnjara, July, p. 19

U

148. Ultraviolet Curing

UV coatings for plastics: fast cures at low temperatures, J. E. Fleischer, September, p. 43

149. Ureas

Insights into molding RIM materials, C. W. Macosko, April, p. 21

V

150. Vacuum Metalizing

UV coatings for plastics: fast cures at low temperatures, J. E. Fleischer, September, p. 43

151. Vibration Welding

Joining large plastic parts? Try vibration welding, J. A. Mock, June, p. 27

152. Viscosity

Melt rheometer update, J. M. Dealy, March, p. 57

A new reinforcement for polypropylene, S. Hoshino, H. Tanaka, and T. Kimura, October, p. 37

Zircoaluminates strengthen premium ranges of chemical coupling agents, L. B. Cohen, November, p. 29

W and Z

153. Welding

Joining large plastic parts? Try vibration welding, J. A. Mock, June, p. 27

154. Zircoaluminates

Zircoaluminates strengthen premium ranges of chemical coupling agents, L. B. Cohen, November, p. 29

author index
